

GCP Marketplace Deployment Diagram for Private Offer and VM Deployment

- 1. Support from CIQ begins immediately after closing the private offer.
- 2a. CIQ begins your custom image build based on your requirements.
- 2b. Customer will subscribe to the appropriate BYOL listing on Google Cloud Marketplace (e.g. Rocky 9 Supported Image by CIQ).
- 3. Customer creates a group in GCP for their project and provides that group to CIQ. This allows CIQ to share the custom image.
- 4. CIQ attaches the group from #3 to CIQs custom image build project as a Viewer.
- 5. CIQ attaches the group to the image being shared so the customer can access the image.
- 6. Customer now has access to the custom image built by CIQ and can access it via "custom images".
